FIG. 3

The diagram illustrates a vehicle communication system. It features two vehicles, 101 and 103, positioned on the left and right sides respectively. Each vehicle is equipped with an antenna, labeled 105 for vehicle 101 and 107 for vehicle 103. These antennas are connected to a central system, 200, which is represented by a large rectangle. Inside this rectangle, there is a smaller rectangle labeled 301, which is identified as the Radio Link Controller (RLC). The RLC is connected to the antennas via dashed lines. Additionally, a line connects the RLC to a Point of Sale (P.O.S.) unit, labeled 303, located at the bottom of the diagram. The P.O.S. unit is represented by a rectangle with the text "P.O.S." and "303" inside it. The entire system is labeled 200 at the bottom center.
